

Please consider very carefully the proposed “BPL” legislation. It would be a terrible disservice to the public in general and to ham radio specifically to allow this to go forward. The documented interference would practically obliterate ham radio on the high frequency bands. This would include, of course, RACES and ARES, which are important to homeland security. Thousands of hams dedicate part of their lives to service the public and it would be a shame, to say the least, to make it impossible for them to continue to serve.

Thanks,
Wendell Johnson
